## **Major Purchase Order from Thailand.**

Mach-Aire is pleased to announce that they have recently received a major purchase order through their agents, BHC Engineering, in Thailand.

The order is for two very large Downflow Containment Booths, fitted with a double level of filtration, which will be used to help prevent hazardous dusts from being inhaled by the operators. Three microbiological safety cabinets are also required, and all of the equipment is destined for a Government owned pharmaceutical organization early next year.

Once the equipment has been installed under Mach-Aire's supervision, then the SAT (Site Acceptance Tests) and commissioning will be undertaken by BHC Engineering, who have the necessary testing equipment, and recently undergone comprehensive training from Mach-Aire.
