New Pharmacy Isolators

Mach-Aire's range of Pharmacy Isolators has benefited from a thorough design review and now comes with many new enhanced features to further meet the containment and aseptic needs of the hospital pharmacist.

Available in either two glove or four glove format, and with positive pressure (IPP range) or negative pressure (ICT range) designs, they all operate at extremely low noise levels.

Applications include dispensing of cytotoxics, TPN products and aseptic compounds.

Manufactured in polished stainless steel with an epoxy coated body and clear acrylic viewing panels, the user friendly ergonomic design is complemented with a PLC which gives excellent functionality, and the whole Isolator is designed specifically for easy access through a single doorway.
